

# Design of Stiffeners and Non-Concentric Brace Connections with RISACONNECTION v3

Tuesday June 11, 2013

**Q:** Can a connection have both a stiffener and web doubler plate. In other word install the web doubler then the stiffener to the web doubler?

**A:** You cannot add both web doublers and stiffeners to the same connection.

---

**Q:** Can RISACONNECTION handle other sections besides I-Beams, such as pipes, tube steel, etc...

**A:** We currently have wide flange, single angle and double angles. We are working on HSS (pipes and tubes) right now and this will be part of the RISACONNECTION v4 release in late 2013.
