

Q: Is there a way to get envelope soil pressure results in RISAFoundation?

A: All the results in RISAFoundation are based on the envelope solution. However we are only showing the envelope of the "Service" LC's. You can find the enveloped results of ALL the Load Combinations in the Point Reactions spreadsheet.

Q: Can you create your own types of special pile caps for eccentric conditions or property line boundaries?

A: You can place single piles at any location in a slab. As for group pile caps, the piles are defined with the pedestal in the center.

Q: Will the slides from the presentation be available?

A: The PowerPoint presentation slides will be available on our website, www.risa.com on the Training > Webinars.

Q: Can I have multiple pedestals on one footing?

A: Yes, you can create a slab and place pedestals anywhere on the slab.

Q: When will RISAFoundation be available with the new pile cap design?

A: It will be available next week, check back at www.risa.com for update information.
